

Features

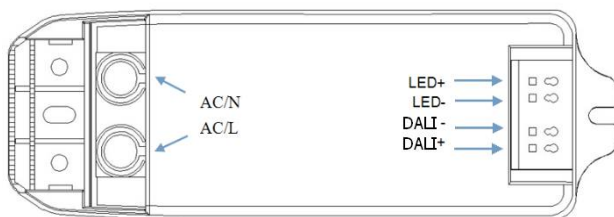

- International universal AC input voltage (up to 265VAC)
- With the active PFC function
- Protections: short circuit/over voltage/over current
- Standard DALI dimming interface
- Big terminal locked by screw
- Suitable for LED
- Protection class II
- Conforms to the world lighting equipment safety standards

The Infinity DALI dimming driver is a constant current dimming LED driver with high power factor, high efficiency, high precision, and uses an efficient stable low loss switch control chip with high performance components.

It uses a standard DALI signal interface that matches all DALI control systems on the market.

Dimming operating

Each Lumens Infinity DALI downlight has one DALI driver, which each must be connected to the DALI system.

DALI (digital addressable lighting interface), the driver directly connects to the DALI control system. The polarity of the signal lines does not need to be minded. Mains voltage and bus line can be led in the same cable.
